MOHHoldings

MOH Holdings Pte Ltd (Reg No: 198702955E)

Introduction

MOH Holdings Pte Ltd (MOHH) has established National health IT enablement programmes to enhance the provision of healthcare in Singapore. Core to the success of these programmes is the need to design and implement solutions that support the identified business and clinical requirements.

A) Consultant , Pharmacy Clinical Informatics (Job Ref: PSS-001)

The Consultant (Pharmacy Clinical Informatics) will provide clinical inputs in the areas of clinical process rationalization and re-design, informatics and clinical change management. Specifically, capabilities related to medication management redesign, medication supply chain optimization and medication safety will be the key focus for this role. This role will provide inputs to ensure that systems being introduced meet the safety and usability requirements to support clinical workflow processes, particularly in the area of medication management, and clinical decision support in the best way possible.

Responsibilities

- Facilitate clinician groups involved in providing requirements for the systems supporting National health IT programmes
- Identify areas where technology can facilitate patient care, services and research through automation, integration, reinforcement and transformation
- Identify, translate and re-engineer business and clinical requirements, workflow and processes for new technology implementations.
- Provide inputs on clinical decision support and clinical integration opportunities
- Review Medical Informatics trends, experiences and approaches
- Apply Medical Informatics approaches to the design and evaluation of clinical IT systems

Requirements

- Degree in pharmacy or related field with at least 5 years' relevant working experience in the area of pharmacy or pharmacy informatics
- Good grasp of pharmaceutical practice and clinical workflow in and across different care settings
- Good communication skills (both written and verbal)

Preferred Skills

- Experience with healthcare IT implementation, or training in Medical Informatics
- Experience in business process re-engineering or workflow analysis
