

## What is this medicine for?

Amisulpride is used to treat and prevent the return of symptoms of psychosis (such as hearing or seeing things which are actually not present, confused or unreal thoughts, suspiciousness, uncontrolled anger or social isolation).

It may also be used for other conditions, check with your doctor.

## Before using this medicine:

Tell your doctor if you have or have ever had Parkinson's disease; heart or kidney disease; breast cancer, seizures (fits) or drug allergies.

**FOR WOMEN: Tell your doctor if you are pregnant, plan to become pregnant, or are breast-feeding.**

## How to use this medicine?

Follow the directions on your medicine label and take the medicine exactly as directed. Do not take more or less of it or take it more often than prescribed by your doctor.

Continue to take this medicine regularly as prescribed even if you feel well. Do not stop taking it without talking to your doctor otherwise your condition may worsen very quickly. Amisulpride must be taken regularly for a few weeks before its full effect is felt.

## Precautions while taking this medicine:

- This medicine may make you drowsy or less alert. Do not drive or operate machinery if affected. Avoid alcoholic drinks.
- Amisulpride may sometimes cause dizziness, especially in the elderly. Getting up slowly from sitting or lying down position may help to lessen the dizziness if affected.
- When you take this medicine with some other medicines, it may affect how they work. Be sure that you tell all doctors, pharmacists, dentists and other health care providers who treat you about all medicines and natural remedies you are taking.

## What should I do if I forget a dose?

Take the missed dose as soon as you remember it. However, if it is more than half way between the doses, skip the missed dose and take your medicine at the usual time.

**Do not take two doses at the same time to make up for a missed one.**

## Possible Side Effects

Like all medications, this medication may also cause some POSSIBLE side effects in some people. Everyone responds differently to medications; so not everyone experiences any or all of them.

### **COMMON (Generally affect up to 10% of patients)**

***Most of these side effects below will get better or go away completely with continued medication taking as your body gets used to this medication. Contact your doctor or pharmacist should they become too bothersome to you.***

- ~ Difficulty sleeping
- ~ Nervousness
- ~ Drowsiness
- ~ Weight gain (exercise regularly and avoid excessive intake of high fat food)
- ~ Changes in menstrual cycle in females (irregular or stopping of menstrual periods)

## **FOR URGENT ATTENTION**

**Check with your doctor as soon as possible if you have any of the following:**

- ~ Allergic reaction: Skin rash or itching, difficulty in breathing, swelling in the face, lips or other parts of the body, or chest pain
- ~ Breast pain
- ~ Muscle spasms (such as face, neck, back or eyelids), up-rolling of eyes or uncontrolled body movements
- ~ Trembling, shaking of arms and legs
- ~ Restlessness or need to keep moving constantly
- ~ High fever
- ~ Muscle stiffness
- ~ Slow, pounding or irregular heartbeat
- ~ Seizures (fits)

**If you have any concerns about your medications or if you have other side effects that you think are caused by this medicine, please consult with your doctor or pharmacist.**

## **Where should I store the medicine?**

Store this medicine at room temperature, away from direct light, heat and moisture (not in the bathroom) and out of reach of children.

Throw away any medication that is expired or no longer needed.

***Do not share the medicine with other people.***

***Ask your doctor or pharmacist for more information or if you have any questions.***
